Implementation Services

The Fast Track to Productivity with Autodesk Revit

The way you implement and use design technology can have a powerful effect on your productivity and efficiency and, ultimately, your bottom line. **Autodesk® Revit® Implementation Services** get you on the fast track to productivity with Autodesk® Revit® building information modeling software. From on-site project analysis and software training to project setup and optimization of business processes, Autodesk Revit Implementation Services have one objective—to help you maximize the benefits of building information modeling and increase your productivity fast.

Autodesk Revit Implementation Services have jump-started our learning curve and allowed us to do things faster and better than we dreamed possible.

—Tom Brooks-Pilling
Director of Architecture
Parsons Brinckerhoff
St. Louis, Missouri

Maximum Productivity, Minimum Startup Time

Design technology can give you the edge you need to stay competitive. But implementing new software can be frustrating and time-consuming—if you go it alone. Beyond just installing the software, you have to think about training staff, migrating existing design data, and setting up new standards—all of which can result in downtime.

Autodesk Revit Implementation Services get you up and running quickly with on-site implementation architects—experts with long-standing industry experience—who evaluate your business processes and technology needs, teach you how to use the software, and help you set up project templates and standards. The result: maximum productivity and return on investment, without the downtime involved in a learn-as-you-go process.

Proven, Flexible Implementation

With Autodesk Revit Implementation Services, you benefit from a proven methodology that has helped architectural, engineering, and construction firms successfully implement Autodesk Revit

software and achieve critical productivity and efficiency gains. What's more, you determine the exact level of services you get—from single-day consulting to a complete implementation package.

How It Works

In many cases, the first step is for an implementation architect to visit your firm and perform a process review to fully understand your workflow and process requirements. This review is followed by project-specific training with step-by-step exercises. Your implementation architect helps you set up your project, complete with templates, standards, and title blocks. Support architects are available throughout the project lifecycle to answer your questions. Implementation architects will also help analyze the project at key milestones to ensure that everything is on track and, upon project completion, will provide a summary for your future projects.

Autodesk Revit Implementation Services

Your Partners in Success

Autodesk Revit Implementation Services representatives are all degreed architects expert in the use of Autodesk Revit software, many with long-time industry experience. Team members include

- **Implementation Architects**—Provide on-site project analysis and implementation
- **Support Architects**—Provide live phone and email support

In addition, education specialists conduct comprehensive on-site training.

Flexible Consulting

Autodesk Revit Implementation Services provide flexible packages to accommodate your firm's unique business and technology needs. Services range from single-day consulting to comprehensive packages with templates, prototypes, and more.

Program Highlights

- **Implementing Building Information Modeling**—A training and comprehensive project implementation program
- **Prototype Development**—Proof-of-concept building design
- **Custom Content Development**—Design of custom content based on your specific requirements
- **Design Charrette**—Week-long, project-based process simulation
- **Customized Consulting**—Consulting services for any length of time you specify
- **Project Assessment**—Development of an implementation plan for a specified project

Learn Fast with Expert Training

Training options include

- **On-Site Training**—Implementing Building Information Modeling at Your Firm (1/2-day course), Autodesk Revit Fundamentals (3-day course), Autodesk Revit Advanced Concepts (2-day course)
- **Distance Learning**—Nine Autodesk Revit web-based seminars included with subscription
- **Classroom Training**—Autodesk Revit courses taught in Autodesk classrooms
- **Custom Training Development**—A training program tailored to your specific requirements

The Autodesk Revit team was available via phone, Internet, and in person to meet all our training needs. I think the educational support was as strong as their commitment to provide the best product. They showed their commitment to our firm and the product by providing one-on-one support for several of our projects, with an aggressive, positive attitude like we haven't seen before.

—Tim Thompson
CAD Manager
Parkhill, Smith & Cooper
Lubbock, Texas

We're pleased with our investment in the future of Autodesk Revit and look forward with great anticipation to starting our next design using Revit! This is a true testament to the success of the Revit training programs and support provided by your group.

—Robert R. Smedley, AIA
Project Design Manager
DMJM Design
Washington, DC
